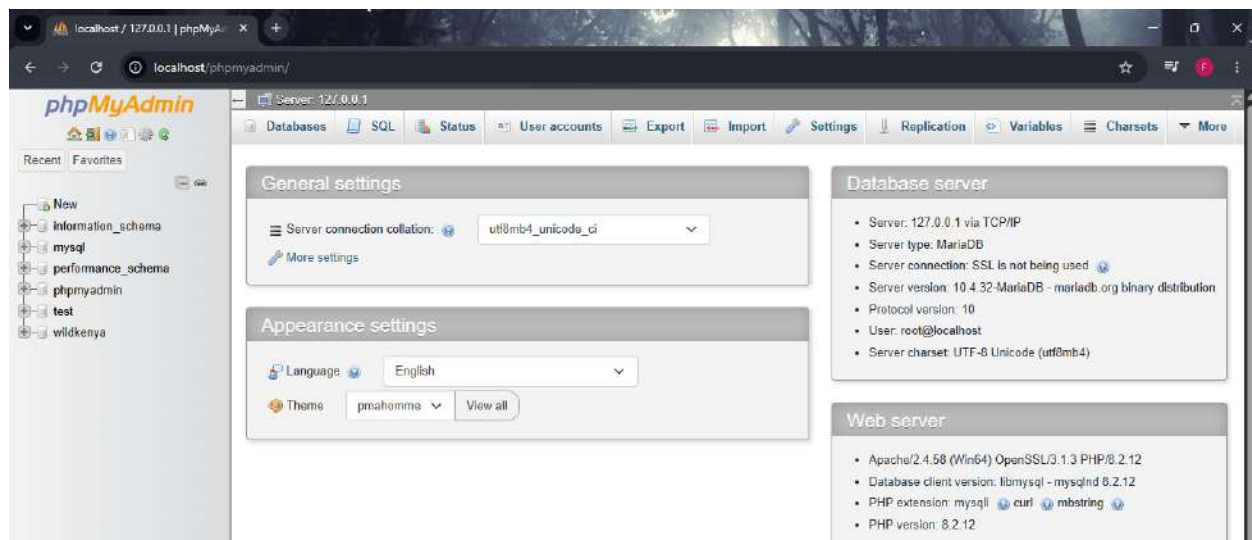

Fig 3-Browser at <http://localhost>

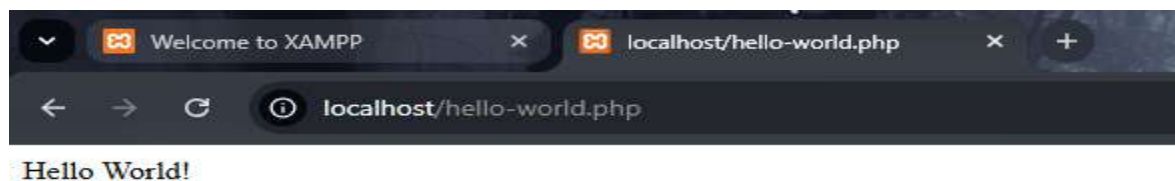

Fig 4-Browser at <http://localhost/hello-world.php>

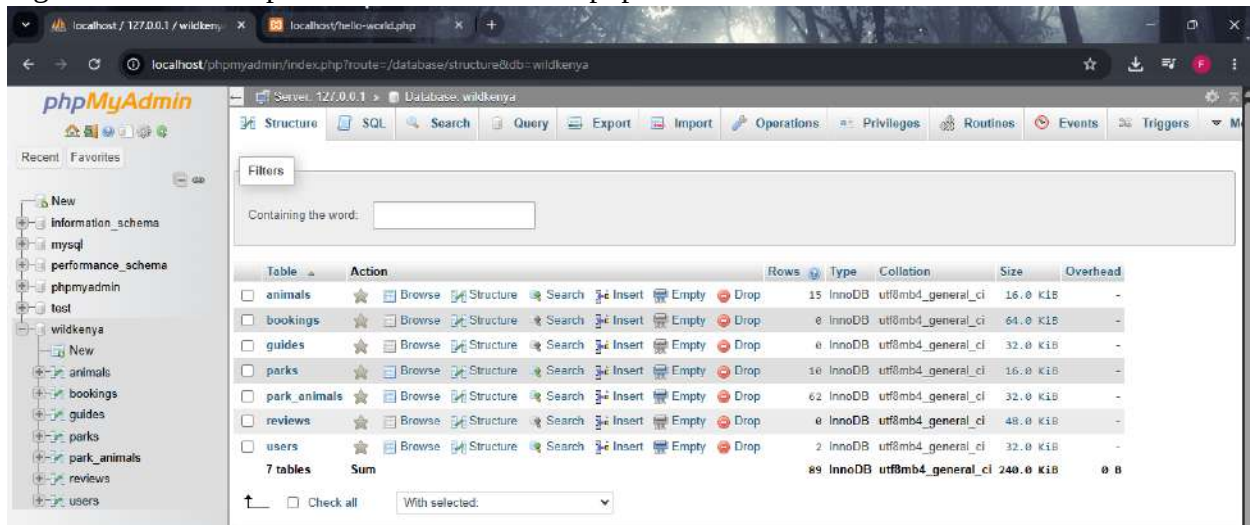

Fig 5-phpMyAdmin showing wildkenya database and 7 tables

WEEK 1 REFLECTION

Installed XAMPP (Apache web server and MySQL database for local web development) on Windows 11 this week. The PHP pages are served by apache on localhost:80 and application data is stored in mysql. In Fig 2 both services are up and running in the XAMPP Control Panel. Browser is running at local host as seen in the figure 3. In Fig 4, you will find a working PHP page that shows hello world. In the phpMyAdmin, after import wildkenya.sql file and creating all 7 tables, a successful connection with the wildkenya database is achieved as shown in Fig 5.

WEEK 2 - Wireframes and GUI Design

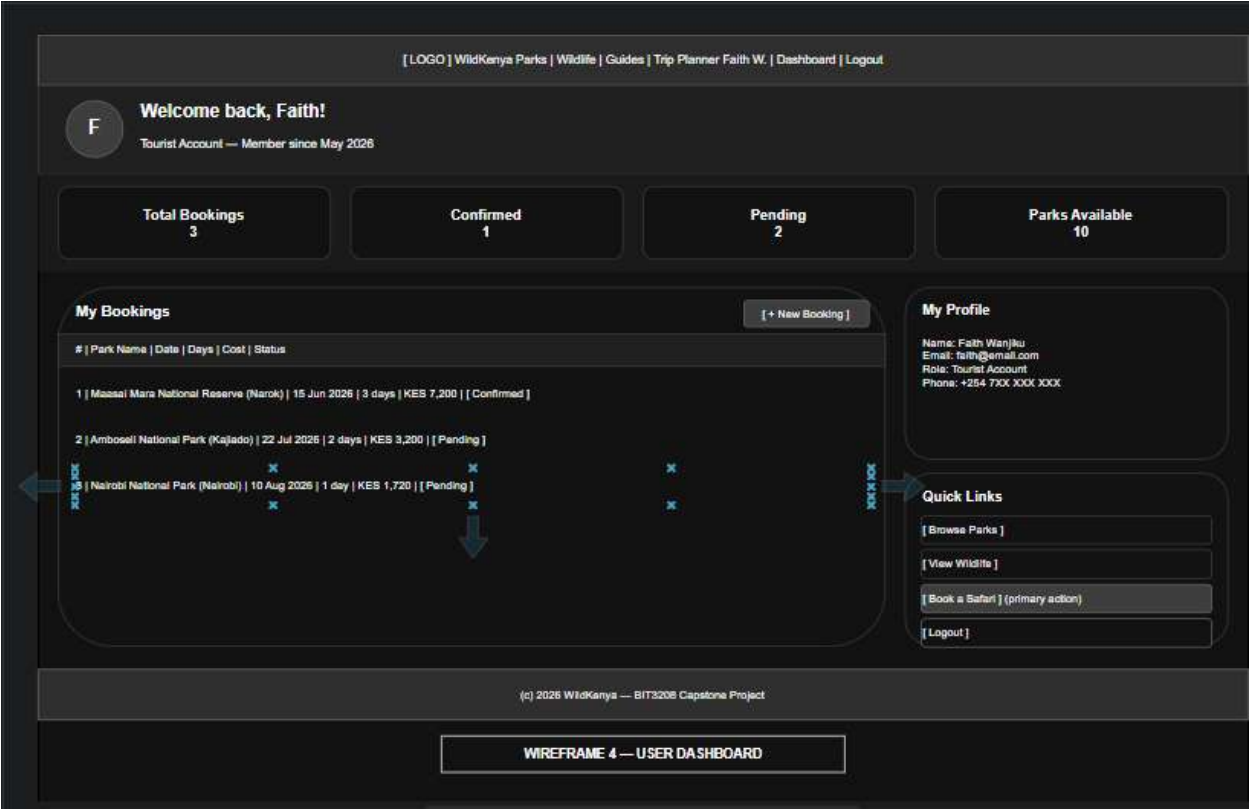

Fig 2-Draw.io wireframe, Dashboard

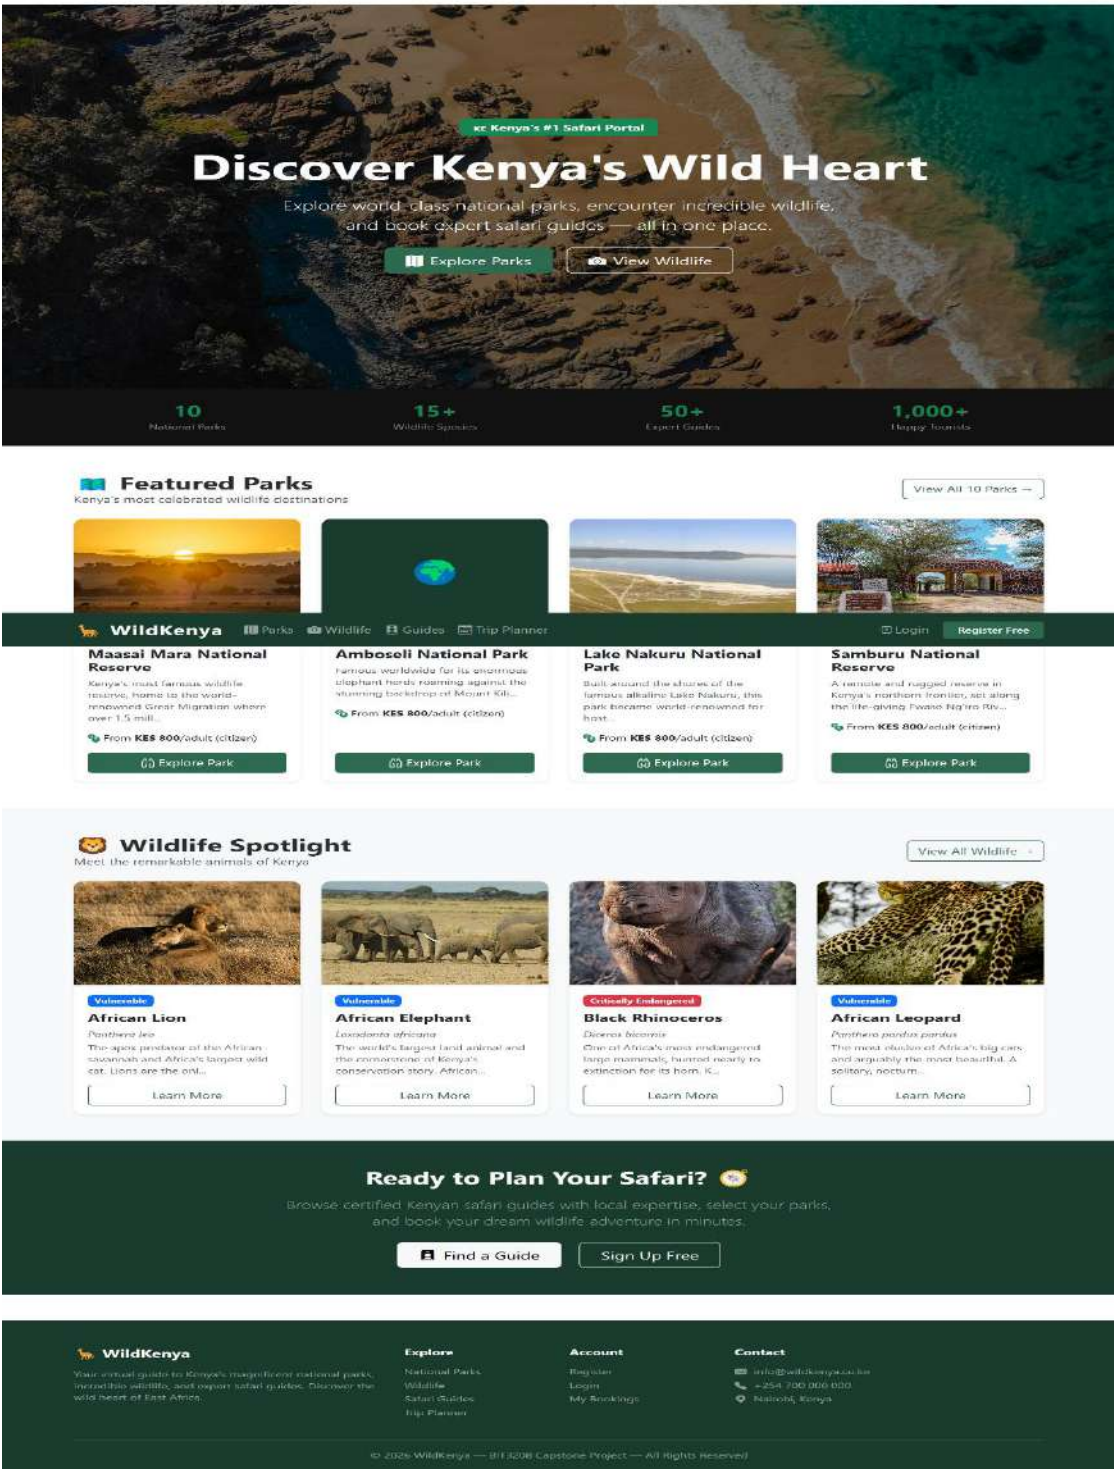

Fig 3-Screenshot of Homepage

Navigation bar and main menu

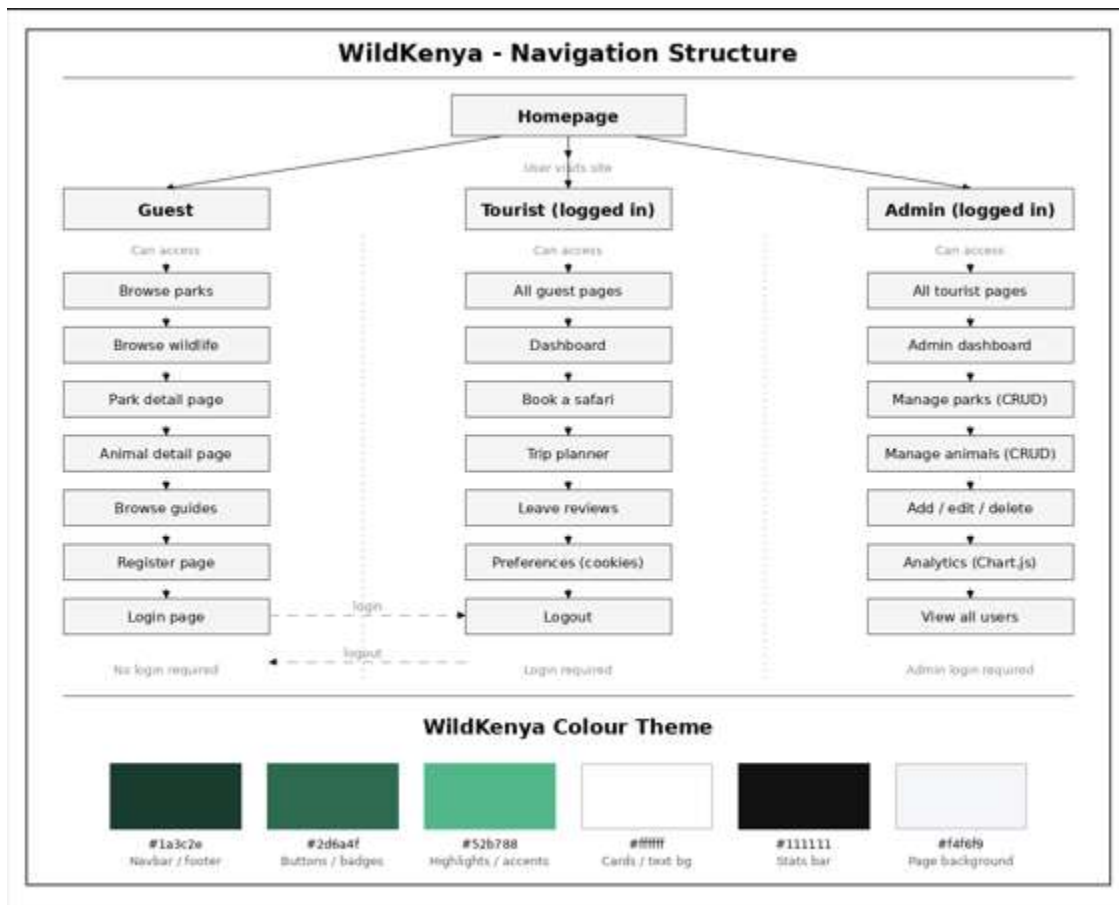

Fig 4-WildKenya navigation bar and main menu structure, navigation structure together with the color theme

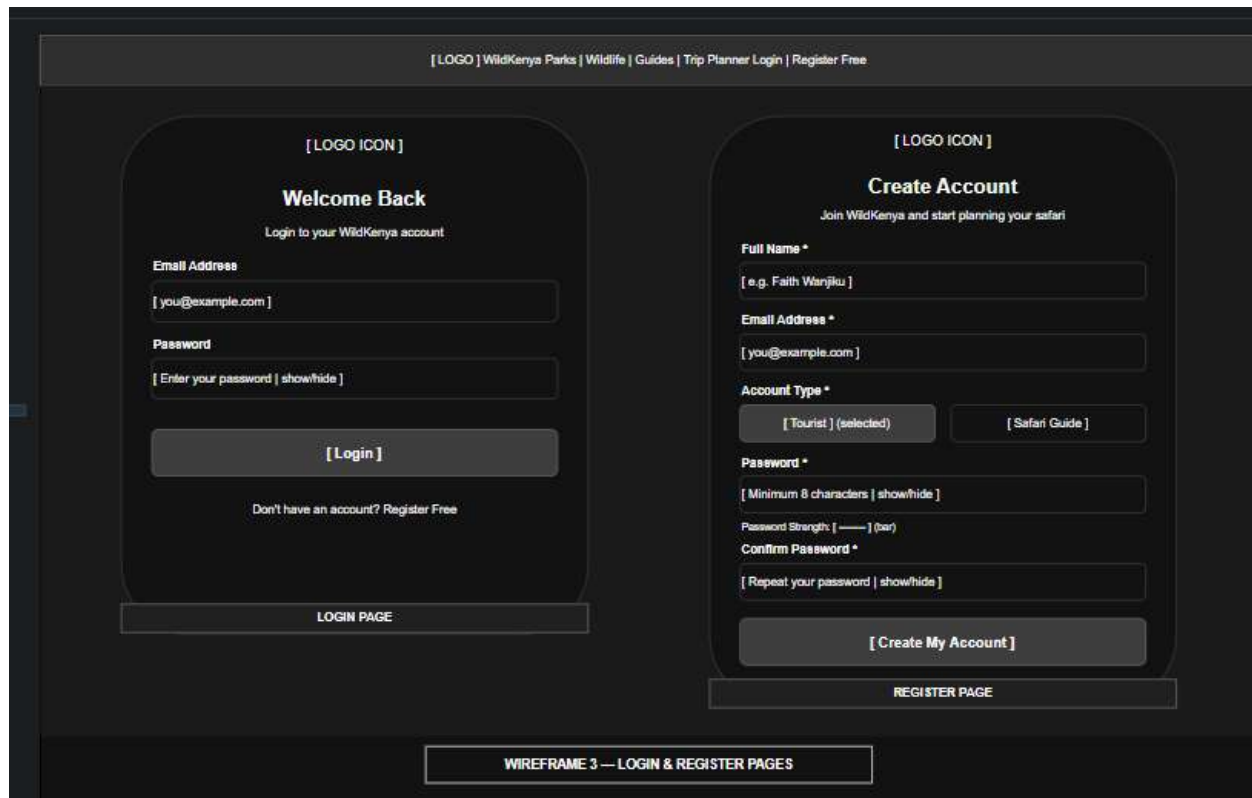

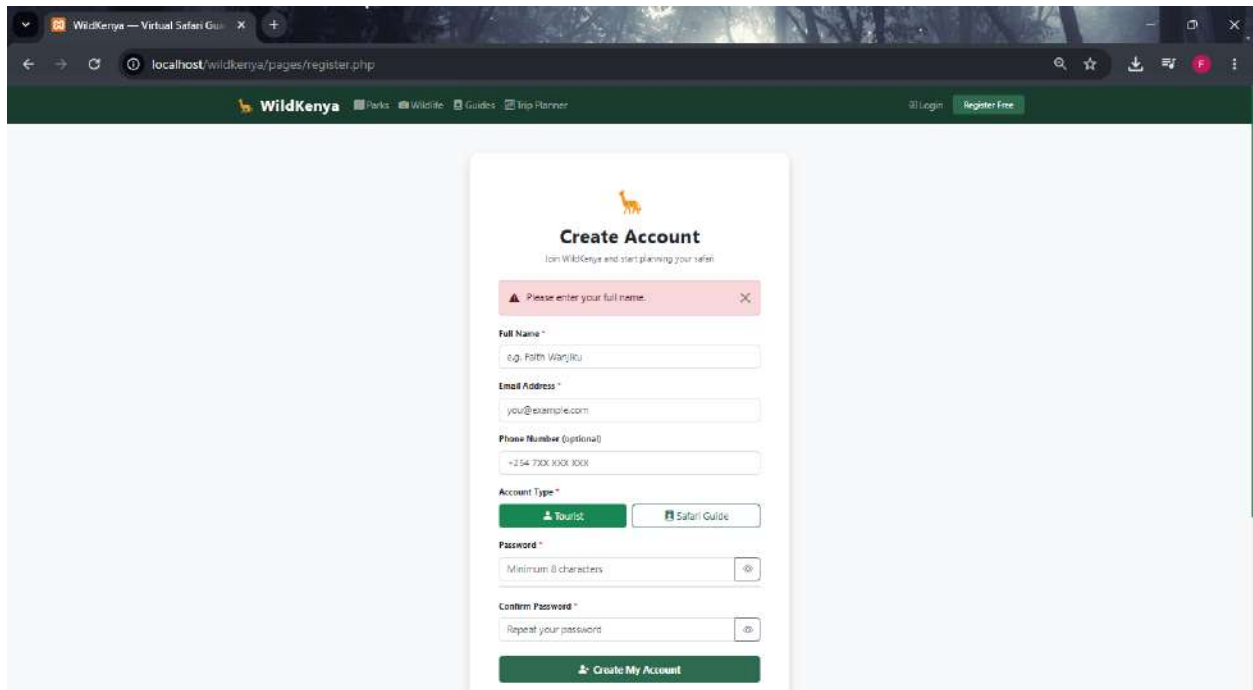

Fig 5: Login and register page wireframes showing form layouts side by side

WEEK 2 REFLECTION

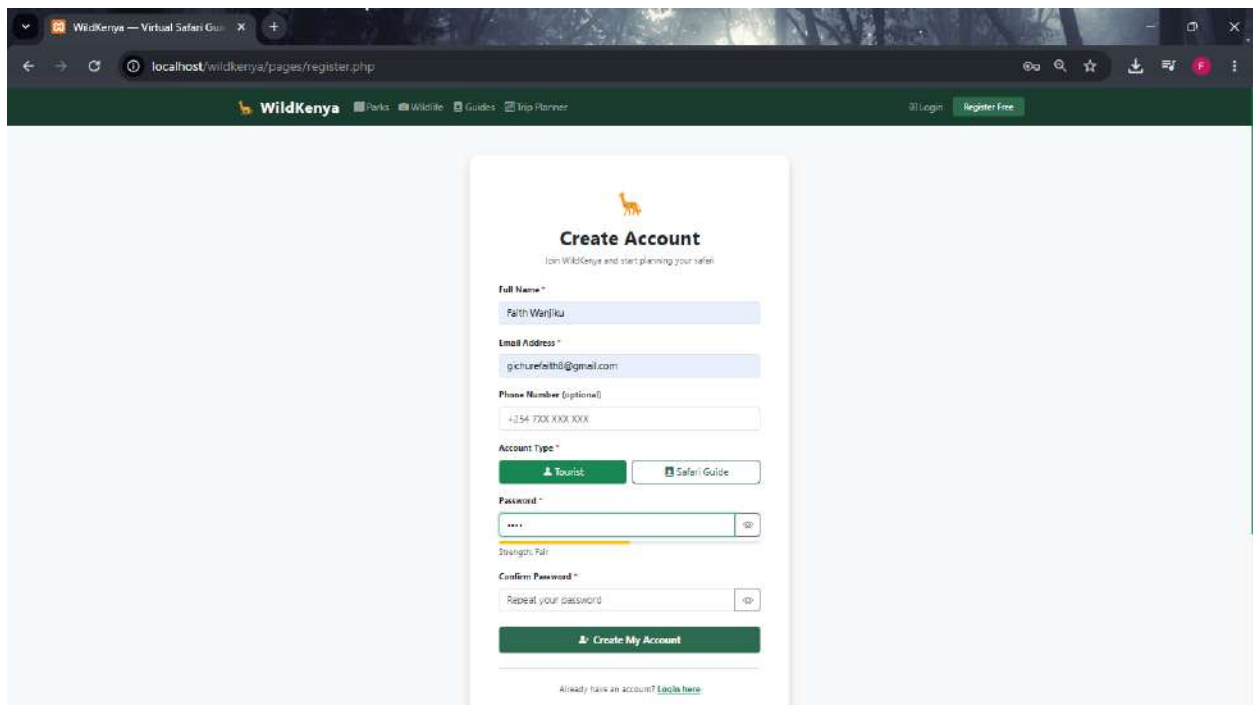

Planning on the portal interface for WildKenya this week, while working on the back end functionality. Homepage, parks listing page, park detail page, login page, sign up page, user dashboard, and booking page were designed using the software Draw.io with 6 wireframes. It was decided that in the theme of Kenya's natural habitat and wildlife, a dark green colour theme (#1a3c2e) should be used. The responsive grid system of Bootstrap 5 made it a perfect choice to ensure that the website is mobile-friendly. The navigation bar was given in the top and the logo was placed at the left side of the website and the login links were placed at the right side of the website, following the website design norms. Three user roles were also to be created: Guest, Tourist and Admin with various levels of access and permissions.

WEEK 3 - JavaScript and PHP Basics

The screenshot shows a web browser window with the URL `localhost/wildkenya/pages/register.php`. The page features a dark green header with the WildKenya logo and navigation links: Parks, Wildlife, Guides, and Trip Planner. A 'Login' link and a 'Register Free' button are also present. The main content area displays a 'Create Account' form with a giraffe icon and the text 'Join WildKenya and start planning your safari'. A red error message at the top of the form states: 'Please enter your full name.' The form fields include: 'Full Name' (with placeholder 'e.g. Faith Wanjiku'), 'Email Address' (with placeholder 'you@example.com'), 'Phone Number (optional)' (with placeholder '+254 700 XXX XXX'), 'Account Type' (with radio buttons for 'Tourist' and 'Safari Guide'), 'Password' (with a minimum 8 characters requirement), and 'Confirm Password' (with a 'Repeat your password' instruction). A green 'Create My Account' button is at the bottom of the form.

Fig 1-Register form showing a validation error

This screenshot shows the same 'Create Account' form, but with valid data entered. The 'Full Name' field contains 'Faith Wanjiku', the 'Email Address' field contains 'gichurefaith@gmail.com', and the 'Phone Number (optional)' field contains '+254 700 XXX XXX'. The 'Account Type' is set to 'Tourist'. The 'Password' field is filled with '****' and has a strength indicator showing 'Strong, Fair'. The 'Confirm Password' field contains 'Repeat your password'. The green 'Create My Account' button is still visible at the bottom. At the very bottom of the form, there is a link: 'Already have an account? [Login here](#)'.

Live Clock (setInterval DOM Update)

23:35:18

Updated every second using
setInterval(() => {timeUpdate()})

Wednesday, 27 May 2026

Key DOM Methods Used in This Page

```
document.getElementById('id')
```

Selects a single HTML element by its id

```
element.innerHTML = '...'
```

Replaces the content inside an element (Demo 2,3)

```
element.textContent = '...'
```

Updates text content without HTML parsing

```
element.style.display = 'none'
```

Hides an element from the page (Demo 1)

```
element.style.backgroundColor = '#...'
```

Changes an element's colour dynamically (Demo 4)

```
setInterval(function, 1000)
```

Runs a function every 1000ms — used for live clock

Fig 5: DOM manipulation live text preview updating review content in real time

WEEK 3 REFLECTION

This week I have added some JavaScript form validation and DOM manipulation to the Wild Kenya project, and started working with PHP for the backend. Empty form submission is prevented in Fig 1 by doing some JavaScript checks on the client side before submitting the form to the server. In the above fig 2, the strength of the password is checked by using regular expressions (regex) to examine the presence of upper-case characters, numbers and special characters. The PHP syntax code practice includes variables, echo statements and a successful `mysqli_connect()` database connection as seen in Fig 3 and Fig 4. When using inner HTML, as in Fig 5, DOM manipulation is used to show a live preview of the review, while the user is typing. These tasks helped to verify integration of the frontend and backend.

WEEK 4 - Server-Side PHP and Authentication

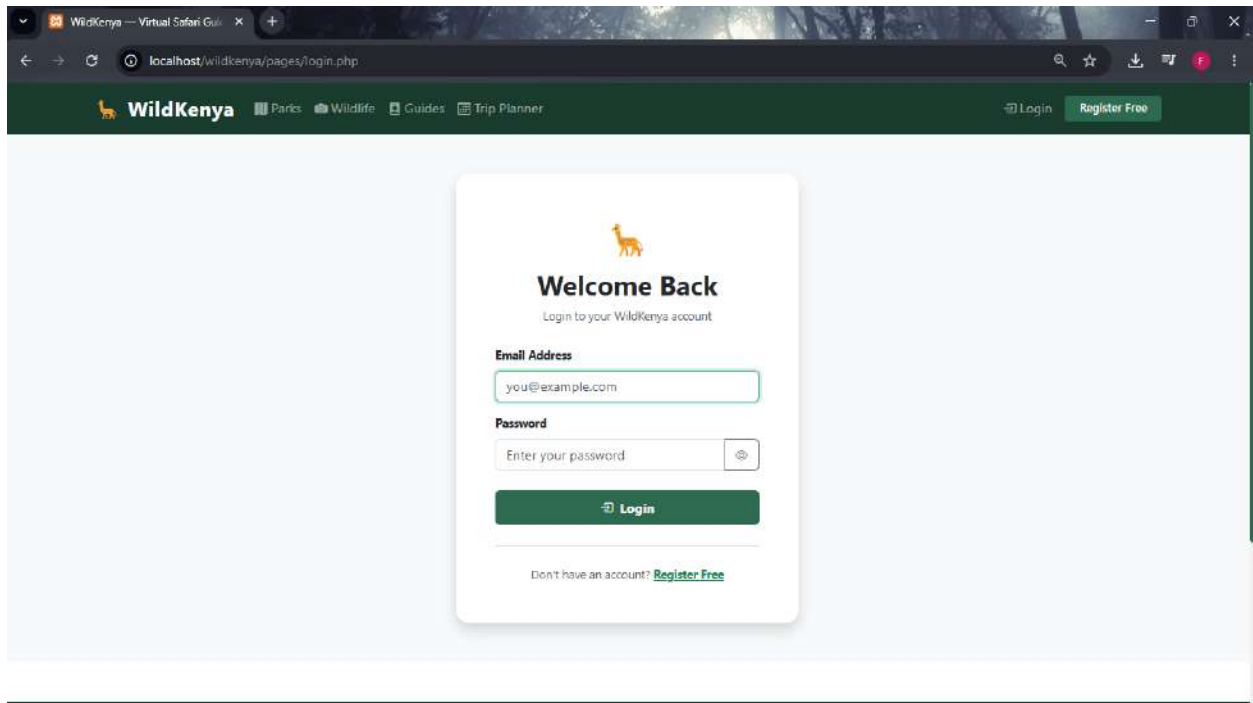

Fig 1-Login page

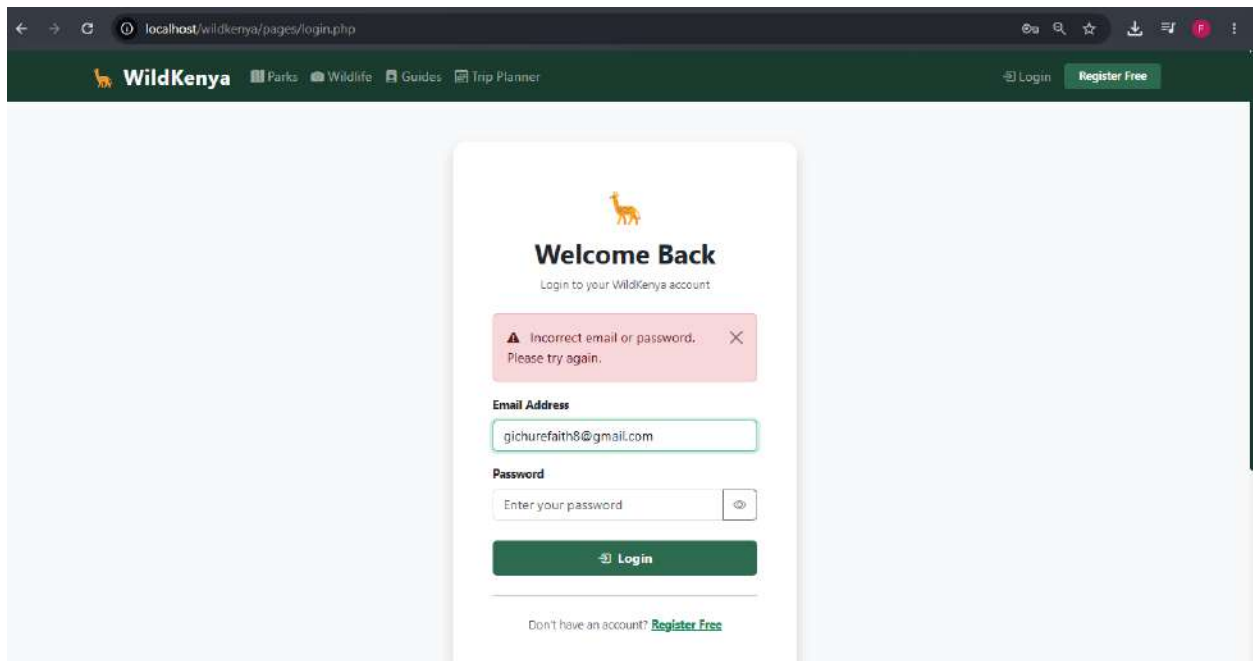

Fig 2- Incorrect password error

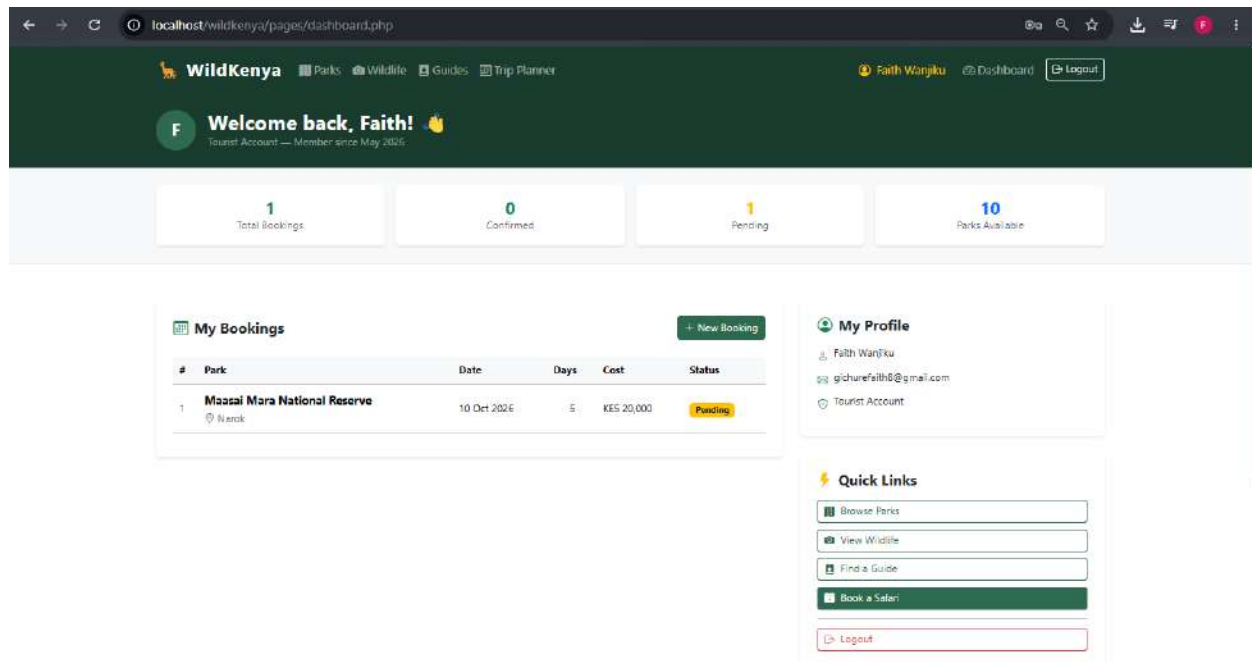

Fig 3-Dashboard after successful login

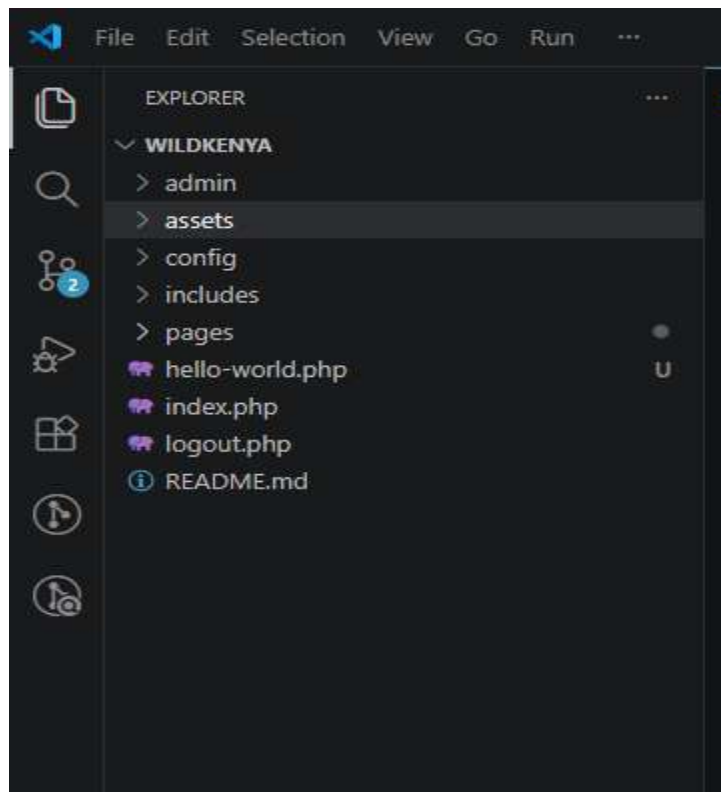

Fig 4-project folder structure

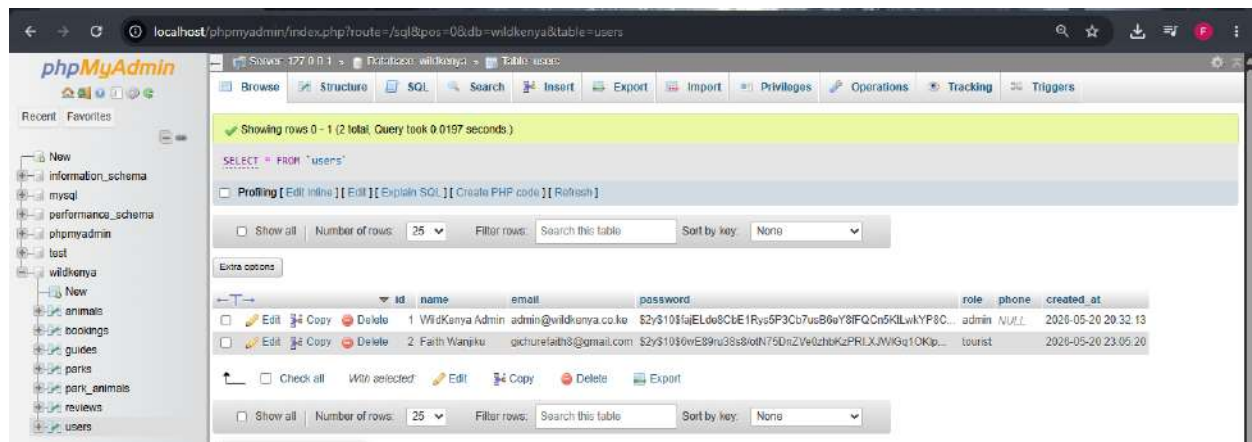

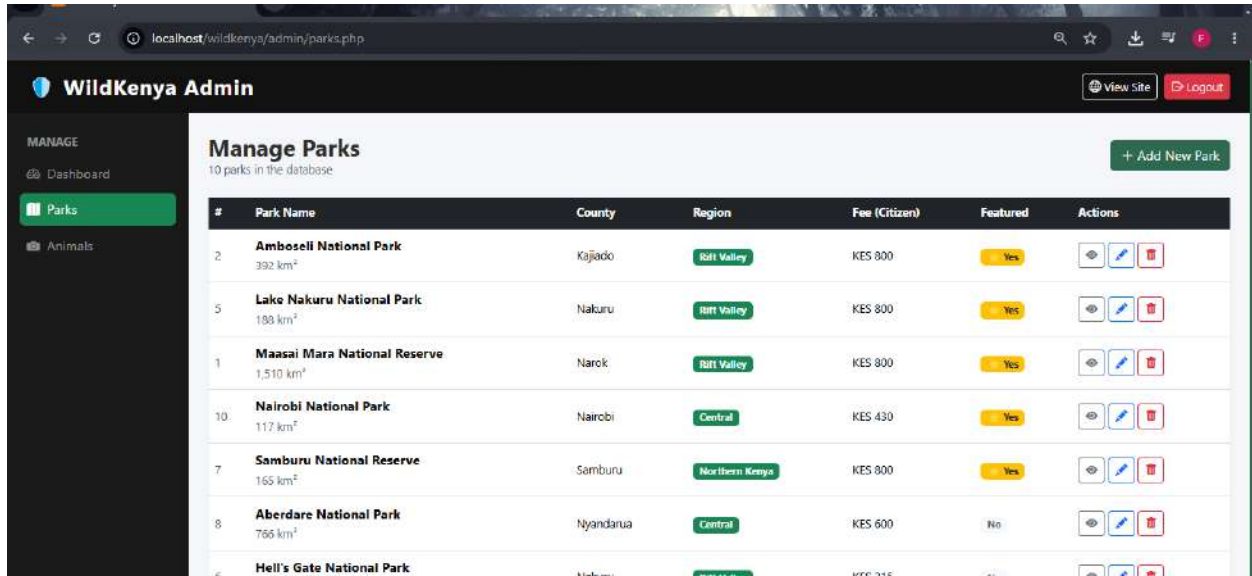

Fig 5-phpMyAdmin users table showing hashed password

WEEK 4 REFLECTION

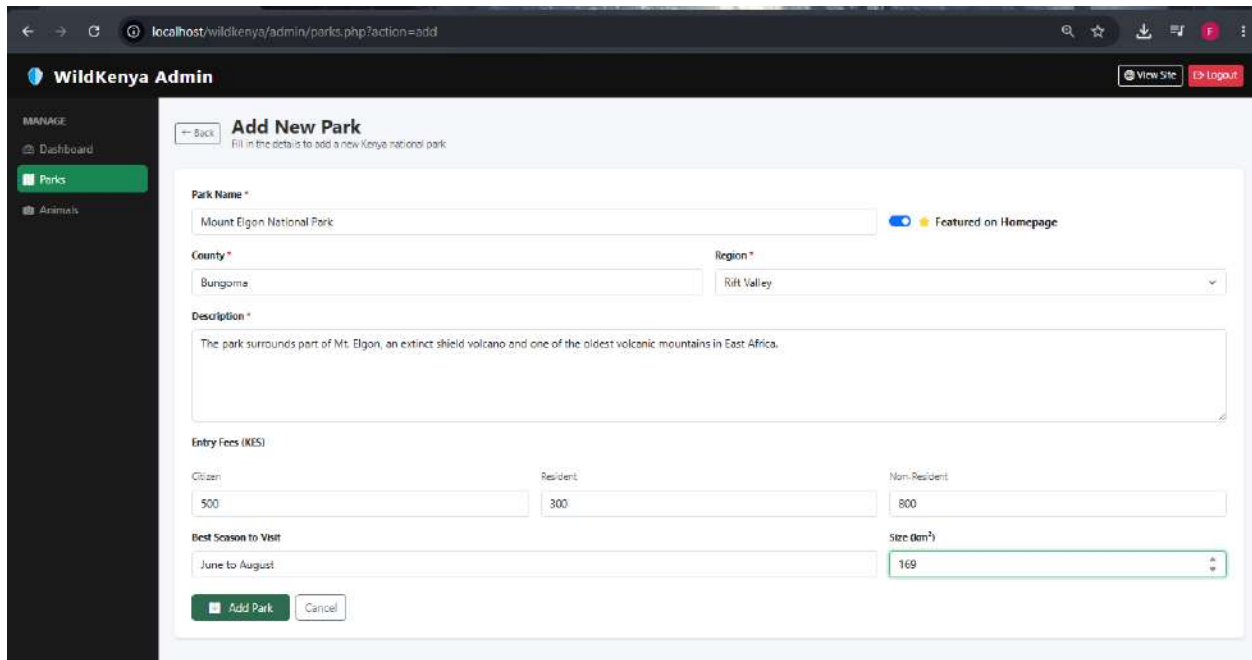

This week I have changed the setup of the form to be server side and completed an authentication system using PHP. Fig 1 and Fig 2 are the logon screen created using POST method of form handling. The submitted email and password are processed using PHP, with the use of prepared statements to improve security, as well as to protect against SQL injection attacks. As you can see from Fig 3, PHP sessions are working fine — once a user logs in you can see that various information is stored in the \$_SESSION array e.g. user ID, User Name, Email, and User Role, and then the User Dashboard will load specific user information. The project has a professional folder structure with four directories: config, includes, pages, admin and assets, organized for better maintainability and organization. Important evidence of security implementation is found in Fig 5 where we need to use password_hash(PASSWORD_BCRYPT) to hash the password, and then use password_verify() with a secure manner.

WEEK 5 - Database CRUD Operation

#	Park Name	County	Region	Fee (Citizen)	Featured	Actions
2	Amboseli National Park 392 km ²	Kajiado	Rift Valley	KES 800	Yes	
5	Lake Nakuru National Park 188 km ²	Nakuru	Rift Valley	KES 800	Yes	
1	Maasai Mara National Reserve 1,510 km ²	Narok	Rift Valley	KES 800	Yes	
10	Nairobi National Park 117 km ²	Nairobi	Central	KES 430	Yes	
7	Samburu National Reserve 165 km ²	Samburu	Northern Kenya	KES 800	Yes	
8	Aberdare National Park 766 km ²	Nyandarua	Central	KES 600	No	
6	Hell's Gate National Park 136 km ²	Elgeyo-Marakwet	Central	KES 500	No

10	Nairobi National Park 117 km ²	Nairobi	Central	KES 430	Yes	  

Fig 3-New Park appearing in the parks list after saving

The screenshot shows the phpMyAdmin interface for the 'wildkenya' database. The 'parks' table is selected, and the following SQL query is executed:

```
1 SELECT id, name, county, region, entry_fee_citizen
2 FROM parks
3 ORDER BY name ASC;
```

The query results show 11 rows of data, including the newly added 'ABERDARE NATIONAL PARK...'. The table structure is as follows:

id	name	county	region	entry_fee_citizen
8	Aberdare National Park	Nyandarua	Central	800.00
2	Amboseli National Park	Kajiado	Rift Valley	800.00
6	Hell's Gate National Park	Nakuru	Rift Valley	215.00
5	Lake Nakuru National Park	Nakuru	Rift Valley	800.00
1	Maasai Mara National Reserve	Narok	Rift Valley	800.00
11	Mount Elgon National Park	Bungoma	Rift Valley	500.00
9	Mount Kenya National Park	Nyeri	Central	800.00
10	Nairobi National Park	Nairobi	Central	430.00
7	Samburu National Reserve	Samburu	Northern Kenya	800.00
3	Tsavo East National Park	Taita-Taveta	Coast	800.00
4	Tsavo West National Park	Taita-Taveta	Coast	800.00

The interface also includes options for query execution, such as 'Show this query here again', 'Retain query box', 'Rollback when finished', and 'Enable foreign key checks'. The 'Query results operations' section provides links for 'Print', 'Copy to clipboard', 'Export', 'Display chart', and 'Create view'. The 'Bookmark this SQL query' section allows users to save the query with a label and permissions.

Fig 4-phpMyAdmin showing a SELECT query result

#	Animal	Scientific Name	Status	Featured	Actions
1	African Elephant	Loxodonta africana	Vulnerable	Yes	[Edit] [Delete]
2	African Leopard	Panthera pardus pardus	Vulnerable	Yes	[Edit] [Delete]
3	African Lion	Panthera leo	Vulnerable	Yes	[Edit] [Delete]
4	Black Rhinoceros	Black rhino	Critically Endangered	Yes	[Edit] [Delete]
5	Cheetah	Acinonyx jubatus	Vulnerable	Yes	[Edit] [Delete]
6	African Buffalo	Synanthicus caffer	Least Concerned	No	[Edit] [Delete]
7	African Wild Dog	Lycaon pictus	Endangered	No	[Edit] [Delete]

13	Plains Zebra	Equus quagga	Least Concerned	No	[Edit] [Delete]
14	Reintroduced Giraffe	Giraffa camelopardalis	Vulnerable	No	[Edit] [Delete]
15	Wild Dog	Cynopterus variegatus	Least Concerned	No	[Edit] [Delete]

Fig 5-Admin Animals page showing all 15 species

WEEK 5 REFLECTION

In this week I created all CRUD database operations for the parks and animals using the admin panel. As can be seen in the above image (Fig 1), the parks manager is dynamically listing out all 10 Kenya national parks using SELECT queries on the MySQL database. In Fig 2, the “Add New Park” form is using a PHP prepared statement to insert into parks. The SELECT query in Fig 3 validates the data is being stored properly in the database in a raw SQL query. Figure 4 illustrates the UPDATE operation with an edit form to edit existing records with an UPDATE park SET. All CRUD operations in the database are executed with prepared statements which are protected from SQL injection attacks with bind_param(). The same CRUD system was successfully used for the 15 wildlife species as seen in Fig 5, which indicates that the database is working well in all modules.

Select your park, guide and dates to plan your adventure

Safari Booking Details

1. Select National Park *
Aberdare National Park (KES 600/person)

2. Select a Safari Guide (optional)
No guide (self-guided)

A guide enhances your safari experience significantly

3. Safari Date * 10/10/2026
Duration (days) * 3

4. Group Size * 4 people (max 20 per booking)

5. Special Requests (optional)
e.g. wheelchair access, dietary requirements, specific animals to see...

Estimated Total Cost
Park: KES 600 × 4 people × 3 day(s) **KES 7,200**

Confirm Safari Booking

Booking status will be **Pending** until confirmed by our team. No payment is taken at this stage.

Booking Tips

- Book at least 2 weeks in advance for the best guide availability
- Visit Maasai Mara July - October for the Great Migration
- Early morning game drives offer the best wildlife sightings
- A certified guide dramatically improves your experience
- Minimum 1 day recommended per park

My Recent Bookings

Maasai Mara National Reserve
10 Oct 2026 — KES 20,000

WEEK 6 REFLECTION

The example in Fig 1 illustrates the dynamic generation of HTML, in which the PHP loop dynamically generates the park cards that are generated based on the results of the MySQL query. In Fig 2, JavaScript is used and acts as a complement to PHP; the filter buttons change the query string of the URL and PHP sends the appropriate filtered results from the database. In the park detail page, multiple tables have been joined together in the SQL query, as illustrated in Fig 3, to present related information such as user reviews and wildlife found in the park. The example in Fig 4 shows a live cost calculator created using JavaScript, that calculates the park fee for various sizes of groups and duration of time spent at the park in real time. The steady and gradual commits to GitHub over the 6 week period is shown in Fig 5, and evidence of progressive growth and development is seen.

WEEK 6 CONTINUATION- Complete authentication

A screenshot of a web browser showing the 'Create Account' form for WildKenya. The browser address bar shows 'localhost/wildkenya/pages/register.php'. The WildKenya logo and navigation links (Parks, Wildlife, Guides, Trip Planner) are in the header. The form is titled 'Create Account' with the subtitle 'Join WildKenya and start planning your safari'. It contains the following fields: 'Full Name' (Faith Wanjiku), 'Email Address' (faithwanjiku123@gmail.com), 'Phone Number (optional)' (+254 7XX XXX XXX), 'Account Type' (Tourist selected, Safari Guide unselected), 'Password' (masked with dots, strength: Fair), and 'Confirm Password' (masked with dots). A 'Create My Account' button is at the bottom of the form. Below the form, there is a link: 'Already have an account? [Login here](#)'.

Fig 4- Hashed passwords in the user's table

The screenshot shows the WildKenya dashboard. The header includes the WildKenya logo, navigation links (Parks, Wildlife, Guides, Trip Planner), and user information (Faith Wanjiku, Dashboard, Logout). The main content area features a welcome message 'Welcome back, Faith!' with a 'Tourist Account' label. Below this are four statistics cards: 'Total Bookings' (0), 'Confirmed' (0), 'Pending' (0), and 'Parks Available' (10). The 'My Bookings' section shows 'No bookings yet' with a 'Start planning your safari adventure!' message and an 'Explore Parks' button. The 'My Profile' section displays the user's name, email, and account type.

Fig 5- Session Management the dashboard page showing "Welcome back name" after logging in

The screenshot shows the WildKenya login page. The header includes the WildKenya logo, navigation links (Parks, Wildlife, Guides, Trip Planner), and a 'Login' button. The main content area features a 'Register Free' button.

Fig 6- Protected dashboard logging out URL directly redirecting to login

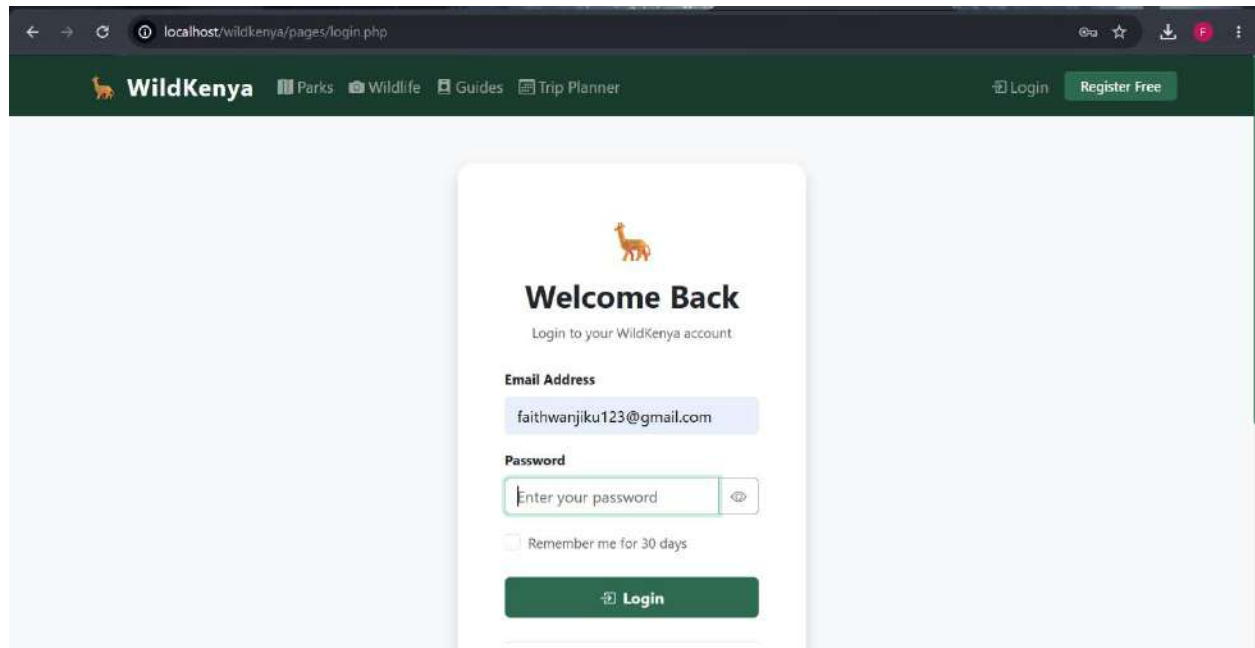

Fig 7- The login page immediately after clicking Logout

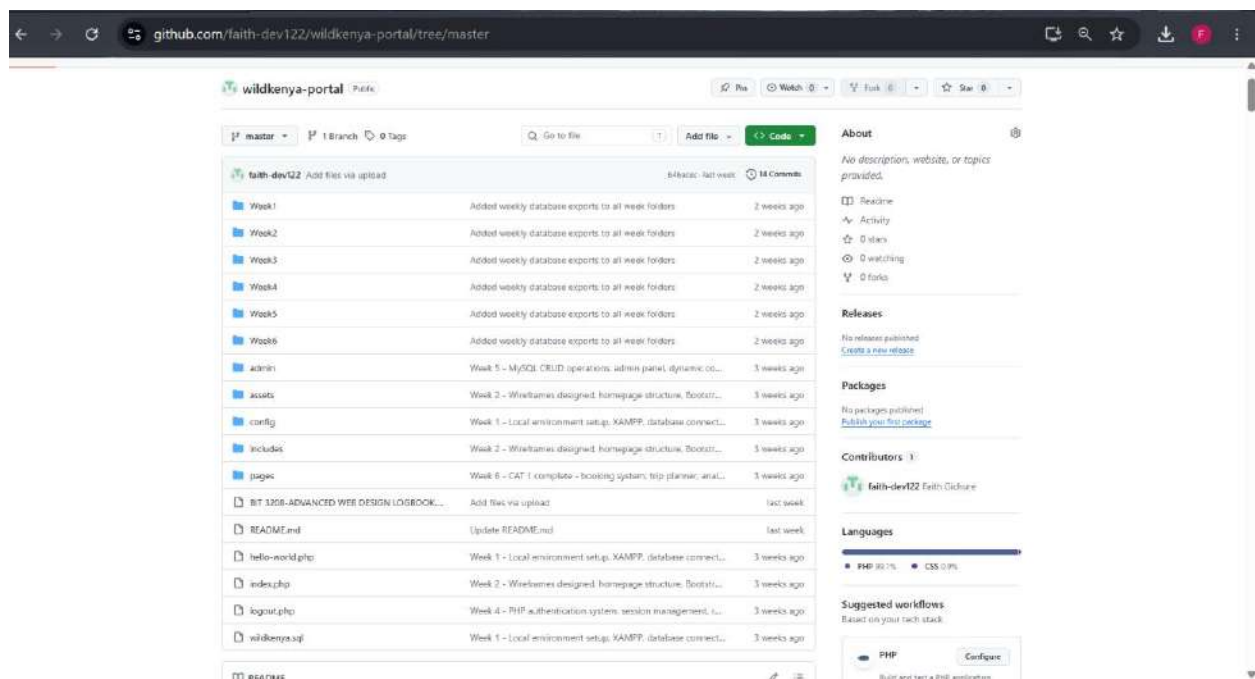

Fig 8- GitHub Documentation wildkenya-portal repository page showing the commit history

WEEK 6 CONTINUATION REFLECTION

This was focused on making sure that each part of authentication module conformed to the standards of a secure web application. Testing the registration form revealed that validation is properly preventing empty fields, invalid emails and passwords that don't match before any data is sent to the database. Login testing confirmed that `password_verify()` accepts the right passwords and rejects the wrong ones, and that sessions remain active between pages without the user having to login again and again. The protected dashboard test was especially important because it proved that users who try to go straight to the dashboard URL without first logging in are safely redirected to the login page rather than seeing protected data. Logout was also tested and verified to clear the session completely, as visiting the dashboard after logout results in the same redirect as an unauthenticated user.

WEEK 7- Remember me, profile management and password change

[Wildlife](#) [Guides](#) [Trip Planner](#)

Welcome Back

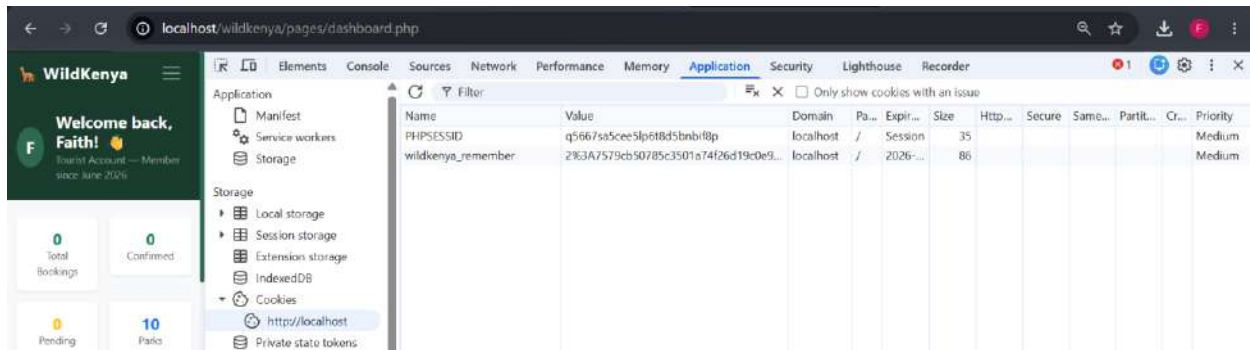

Fig 2- Chrome DevTools Application tab showing the wildkenya_remember cookie stored under localhost after logging in with Remember Me checked

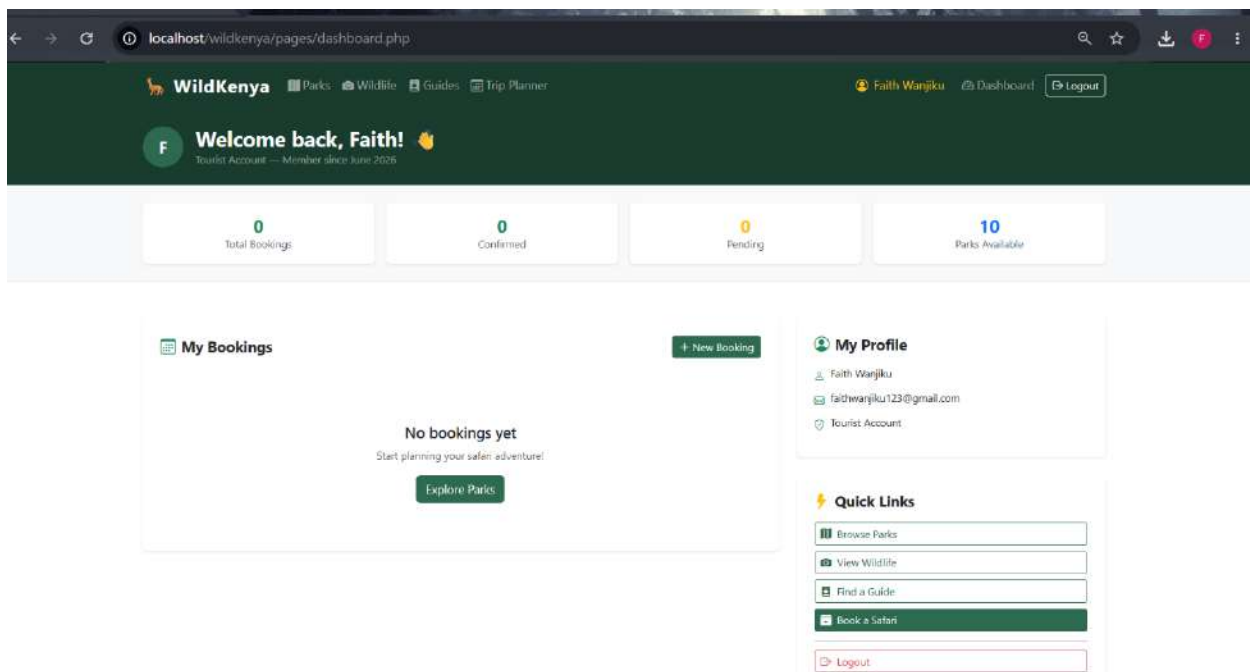

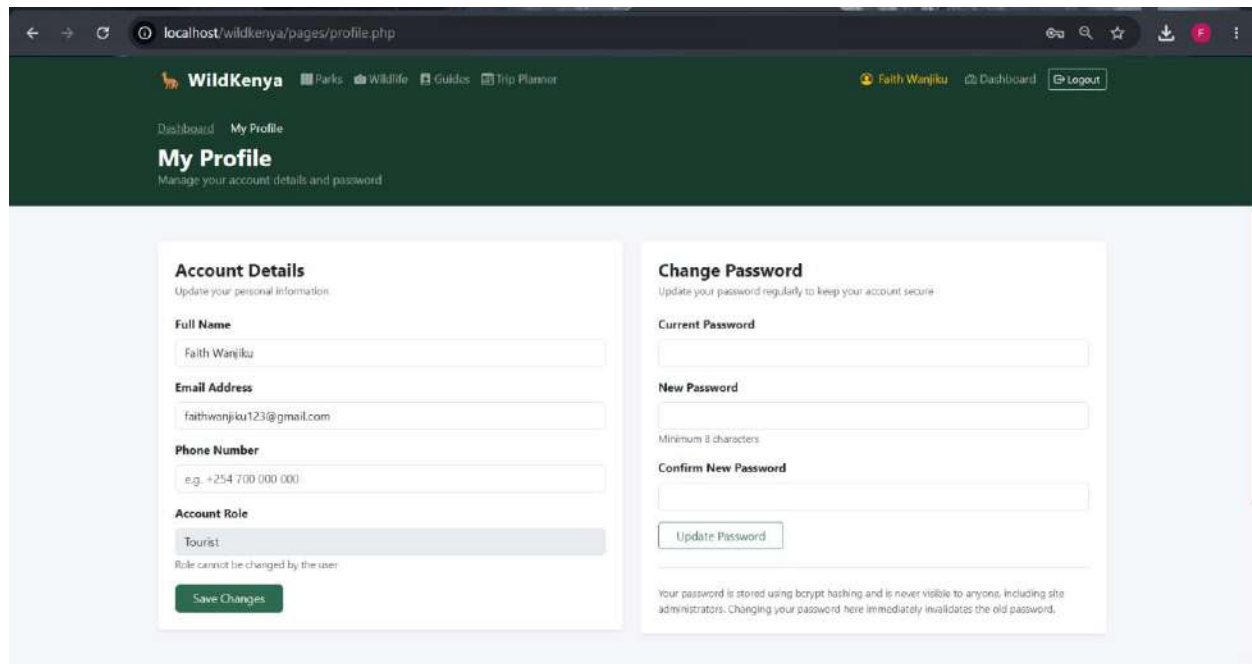

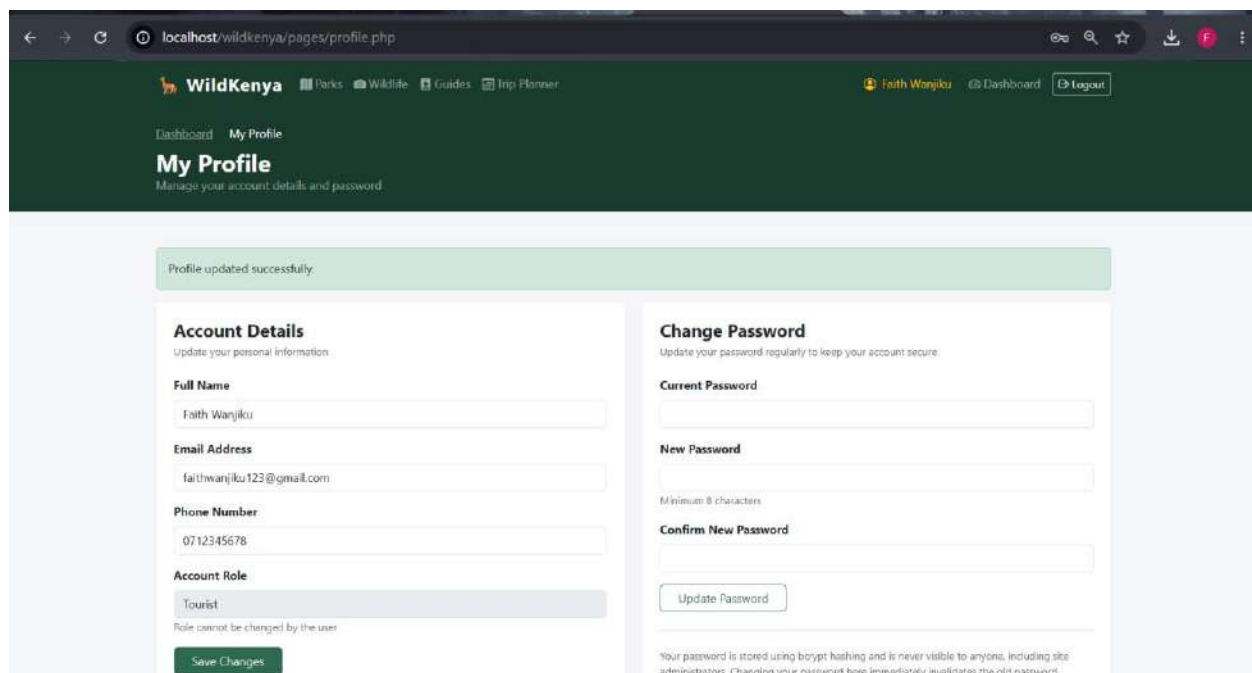

Fig 3- Dashboard page loading automatically after closing and reopening the browser, confirming the Remember Me cookie restored the session

The screenshot shows a web browser at the URL `localhost/wildkenya/pages/profile.php`. The page has a dark green header with the WildKenya logo and navigation links: Parks, Wildlife, Guides, and Trip Planner. On the right of the header, the user is logged in as 'Faith Wanjiku' with links to 'Dashboard' and 'Logout'. Below the header, there are two tabs: 'Dashboard' and 'My Profile', with 'My Profile' being the active tab. The main content area is titled 'My Profile' with the subtitle 'Manage your account details and password'. It contains two side-by-side forms. The left form, 'Account Details', has fields for 'Full Name' (Faith Wanjiku), 'Email Address' (faithwanjiku123@gmail.com), 'Phone Number' (e.g. +254 700 000 000), and 'Account Role' (Tourist). A 'Save Changes' button is at the bottom. The right form, 'Change Password', has fields for 'Current Password', 'New Password' (with a 'Minimum 8 characters' note), and 'Confirm New Password'. An 'Update Password' button is at the bottom. A note at the bottom of the right form states: 'Your password is stored using bcrypt hashing and is never visible to anyone, including site administrators. Changing your password here immediately invalidates the old password.'

Fig 4- Profile management page showing the current name, email and phone number fields

This screenshot shows the same 'My Profile' page as Figure 3, but with a green success message at the top: 'Profile updated successfully.' The 'Account Details' form now shows the 'Phone Number' field with the value '0712345678'. The 'Change Password' form remains the same. The rest of the page layout, including the header and navigation, is identical to the previous figure.

Fig 5- Success message displayed after updating profile details

The screenshot shows a web browser at the URL `localhost/wildkenya/pages/profile.php`. The page has a dark green header with the WildKenya logo and navigation links: Parks, Wildlife, Guides, and Trip Planner. The user is logged in as 'Faith Wanjiku' and is on the 'Dashboard' page. The main content area is titled 'My Profile' with the subtitle 'Manage your account details and password'. A green success message at the top of the form area reads 'Password changed successfully.' Below this, there are two main sections: 'Account Details' and 'Change Password'. The 'Account Details' section includes fields for 'Full Name' (Faith Wanjiku), 'Email Address' (faithwanjiku123@gmail.com), and 'Phone Number' (0712345678). The 'Account Role' is set to 'Tourist' with a note that the role cannot be changed by the user. A 'Save Changes' button is at the bottom of this section. The 'Change Password' section has fields for 'Current Password', 'New Password' (with a minimum 8 characters requirement), and 'Confirm New Password'. An 'Update Password' button is at the bottom of this section. A footer note states: 'Your password is stored using bcrypt hashing and is never visible to anyone, including administrators. Changing your password here immediately invalidates the old password.'

WEEK 7 REFLECTION

This week I have made three practical improvements to the authentication module. The Remember Me feature saves a cookie with the user's ID and a token generated by `hash_hmac` using the password hash as the secret key. So if the password has changed, the cookie is no longer valid. Testing was performed by closing and opening the browser, which successfully restored the user's session without requiring to login again. Profile Management Logged-in users can update their name, email and phone number via a form that is linked to the `users` table. The Change Password feature required a bit more attention. It checks the current password with `password_verify()` before saving the new hashed password, so that only someone who knows the current password can change it.

WEEK 8- Responsive Web Design and Mobile-First Development.

165     justify-content: center;
166   }
167 }

```

Fig 5- style.css showing Flexbox layout and Mobile-First base styles

WEEK 8 REFLECTION

This week focused on the introduction of Responsive Web Design and Mobile-First Development. While Bootstrap 5 was already used for the layout, WildKenya did not have any explicit custom CSS that shows responsiveness at the moment. The style.css file was updated following an approach of "mobile first", meaning that the base styles that define the basic layout of the site were applied to mobile screens and media query breakpoints at 768px and 1024px progressively added more styles for larger screens. A custom CSS Grid class was also added to the parks listing page, which shows one column on mobile, two on tablet and three on desktop. The profile page layout and hero section buttons were also redesigned using flexbox. The grid is adapting to the screen sizes as shown in Figures 1 to 3 and the website's CSS is shown in Figures 4 and 5 which means it now adheres to the contemporary responsive web design rules in all devices.
